Become a Web Developer

Join BeCode & find a job!

Learn how to build websites and apps. The training is 100% free and focuses on helping you become a junior frontend or backend developer.

7 Months training
+2 months internship

Front-End

Front-End consists of the visual elements that appear on your screen, what the website or app looks like.

Back-End

Back-end is the internal structure of a website or app, what you see when you edit the platform.

Conditions

- Job seekers (Actiris, VDAB, Le Forem)
- + 18 years
- Complete the 4 modules on SoloLearn (HTML, CSS, JavaScript & PHP)

Training Content

- Terminal, Git, Markdown, HTML, CSS, SASS, CSS frameworks
- Frontend problem solving
- Soft skills
- JavaScript
- OOP, MVC, JavaScript libraries and frameworks (React)
- Specialization: nodejs, PHP, Salesforce, Java, etc.

Infos

Diploma isn't required!

Ghent

VDAB Actiris DIGITAL Le Forem

Learn how to build websites and apps. The training is 100% free and focuses on helping you become a junior frontend or backend developer (or both, a fullstack developer). It also helps you gain great professional soft skills: reliable, eager to learn and team player with a solution mindset.

Prerequisites

- To be over 18
- To be registered as an unoccupied job seeker with VDAB, Actiris or Le Forem
- No specific diploma or university degree
- Curiosity
- Self-learner
- Strong motivation
- Problem-solver mindset

You will learn tech skills

You will discover all aspects of website and mobile app development. The training focuses both on "Front-End" and "Back-End". Front-End consists of the visual elements that appear on your screen, what the website or app looks like. Back-End is the internal structure of a website or app, what you see when you edit the platform.

What?

- Terminal, Git, Markdown, HTML, CSS, SASS, CSS frameworks
- JavaScript
- Front-End problem solving
- OOP, MVC, JavaScript libraries and frameworks (React)
- Depending on the trainers: Server Side JavaScript (Node.js), PHP, C#, ...
- Learning by teaching
- How to market yourself.
- Specialize in the IT field of your choice

... And soft skills

Start a career in Cybersecurity

Join BeCode & find a job!

What ?

This training covers the fundamentals of computer and network security, advanced security protocols and technologies, incident response and management, risk management and compliance, as well as soft skills essential for working in a cybersecurity team.

Training content

- **System Administration:** Command line, system configuration, managing users on Windows and Linux.
- **Networks:** Using the networking simulation tool Cisco Packet Tracer.
- **Programming:** Advanced scripting with Python, Bash, and PowerShell.
- **Analysis:** Log collection, incident severity evaluation, traffic analysis, and setting up IDS/IPS systems.
- **Penetration:** Enumeration, exploitation, and post-exploitation using tools such as nmap, Metasploit, and Searchsploit.

Conditions

- Job seekers
- Tech savvy
- Problem-solving mindset
- Intermediate English level (B2)
- Solution oriented
- Motivated
- Editorial skills

Becomes
Cyber Security Analyst
Incident Responder
Pentester

CYBERSECURITY
</becode>

Start a career in Cyber Security
in 7 months free

</becode> VDAW SYNTRA Vlaanderen DIGITAL gend actiris.brussels BRUXELLES FORMATION GERA forem digital wagnia

As a Cyber Security Analyst, you will help companies secure their IT systems. You will learn how to monitor and evaluate an infrastructure its vulnerabilities and you will discover cyber attack risk mitigation. In just 7 months. For free!

Prerequisites

- To be tech savvy
- To be solution oriented
- To have quite a dose of motivation
- To be autodidactic
- To have editorial skills
- To speak and understand French
- To have a B2 level in English, in speaking and writing A

This is what you'll gain

This training aims at preparing you to become a Cyber Security Analyst, based on your existing knowledge and the ones you will acquire at BeCode. That is why we will look into the following domains:

System administration: command line, system configuration, users (Windows and linux), etc.

Networks: networking simulation tool (Cisco packet tracer)

Programming: advanced scripting (Python, Bash, Powershell, etc.)

Analyst: log collecting (Syslog, Traps SNMP, Opsec, IDMEF...), managing and evaluating incident severity. Traffic analysing (Wireshark, tcpdump, etc.).

Setting up IDS and IPS (NIDS, HIDS, NIPS, HIPS)

Pentest: introduction to the following tests ->

Enumeration (nmap, dirbuster, Nikto, etc.)

Exploitation (SearchSploit, Metasploit, etc.)

Post-exploitation

Diploma isn't required!
